...

---

Listing 16.7

---

```
<p>
If installing HelloWorld warns you that "The Publisher could not be verified", you
may ignore the warning. This warning is given because the file is not digitally
signed. Here are two things you can do to ease your mind about ignoring this
warning:
</p>

<ol>
<li>Scan the file for viruses. We test our files for viruses before we make them
available for download. However, you should always scan downloaded software for
viruses, regardless of how much you trust the Web site from which you downloaded
it.</li>
<li>Verify that the file name and size are the same as the file we officially put
on the Web. If not, the file may have been tampered with and you should not install
it.

<ul>
<li>HelloWorldSetup1_0.exe - file size 950 KB (972,630 bytes)</li>
<li>HelloWorldJRESetup1_0.exe - file size 14,994 KB (15,353,287 bytes)</li>
</ul>

</li>
</ol>

<p>
A valid digital signature guarantees two things about the file: it has not been
modified since it was signed, and it came from the expected source. However, you
still must decide how much you trust that the company's software will not cause
harm. A digital signature does not guarantee software quality or safety.
</p>

<p>
It is our hope that if you scan our software for viruses and verify the file name
and size, you may feel comfortable using our software even though it is not
digitally signed. By performing these steps manually after downloading software
from our Web site, you gain an assurance that the program is safe. Not signing our
software helps keep our prices low.
</p>
